

# Mark Scheme (Results)

January 2024

Pearson Edexcel International Advanced Level in Mechanics M2 (WME02) Paper 01

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

#### Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

January 2024 Question Paper Log Number P74318A Publications Code WME02\_01\_2401\_MS All the material in this publication is copyright © Pearson Education Ltd 2024

#### **General Marking Guidance**

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## EDEXCEL IAL MATHEMATICS

#### **General Instructions for Marking**

- 1. The total number of marks for the paper is 75.
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- **M** marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- **B** marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.
- 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes and can be used if you are using the annotation facility on ePEN.

- bod benefit of doubt
- ft follow through
- the symbol  $\sqrt{}$  will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- d... or dep dependent
- indep independent
- dp decimal places
- sf significant figures
- \* The answer is printed on the paper or ag- answer given
- \_ or d... The second mark is dependent on gaining the first mark

- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected. If you are using the annotation facility on ePEN, indicate this action by 'MR' in the body of the script.
- 6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

## **General Principles for Mechanics Marking**

(NB specific mark schemes may sometimes override these general principles)

- Rules for M marks:
  - correct no. of terms;
  - dimensionally correct;
  - all terms that need resolving (i.e. multiplied by cos or sin) are resolved.
- Omission or extra g in a resolution is an accuracy error not method error.
- Omission of mass from a resolution is a method error.
- Omission of a length from a moments equation is a method error.
- Omission of units or incorrect units is not (usually) counted as an accuracy error.
- DM indicates a dependent method mark, i.e. one that can only be awarded if a previous specified method mark has been awarded.
- Any numerical answer which comes from use of g = 9.8 should be given to 2 or 3 SF.
- Use of g = 9.81 should be penalised once per (complete) question.
  - N.B. Over-accuracy or under-accuracy of correct answers should only be penalised *once* per complete question. However, premature approximation should be penalised every time it occurs.
- Marks must be entered in the same order as they appear on the mark scheme.
- In all cases, if the candidate clearly labels their working under a particular part of a question i.e. (a) or (b) or (c)...then that working can only score marks for that part of the question.
- Accept column vectors in all cases.
- Misreads if a misread does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, bearing in mind that after a misread, the subsequent A marks affected are treated as A ft

## **Mechanics Abbreviations**

- M(A) Taking moments about A.
- N2L Newton's Second Law (Equation of Motion)
- NEL Newton's Experimental Law (Newton's Law of Impact)
- HL Hooke's Law
- SHM Simple harmonic motion
- PCLM Principle of conservation of linear momentum
- RHS Right hand side
- LHS Left hand side

1a	Use of $v = \frac{\mathrm{d}x}{\mathrm{d}t}$	M1	At least 2 powers going down by 1. Clear division by <i>t</i> is M0
	$v = 6t^2 - 42t + 60$	A1	Correct only
	Set $v = 0$ and correctly solves to obtain 2 values for $t$	M1	Complete method to obtain both values (implied by correct answers seen) $(0 = t^2 - 7t + 10 = (t - 2)(t - 5))$
	Obtain $t = 2$ and $t = 5$	A1	Correct only. Allow 2.0, 5.0
		[4]	
1b	Distance = $ x_2 - x_1  +  x_3 - x_2 $ (= $ 45 - 52  +  52 - 41 $ )	M1	Correct strategy dependent on their <i>t</i> being in $1 < t < 3$
	=11+7=18 (m)	A1	Correct only
		[2]	
1c	Use of $a = \frac{\mathrm{d}v}{\mathrm{d}t}$	M1	Differentiate their v. Clear division by t is M0. A power going down by 1 (a=12t-42)
	Obtain $6(ms^{-2})$	A1	Must be positive – the Q asks for magnitude
		[2]	
		(8)	

$\begin{array}{ c c c c c c c c c c c c c c c c c c c$			3.41	ND C 1
$\begin{array}{ c c c c c c c c c c c c c c c c c c c$	2a	Use of $\mathbf{I} = m\mathbf{v} - m\mathbf{u}$	M1	NB: Column vectors are acceptable.
$\begin{array}{ c c c c c c c c c c c c c c c c c c c$				e
$\begin{array}{ c c c c c c c c c c c c c c c c c c c$				e
$\begin{array}{ c c c c c c c c c c c c c c c c c c c$				
Accept as a vector equation or as a pair of equations, one for each component. Accept alternative notations provided the meaning is clear.Use of PythagorasM1For their v Independent M1 but they must have a v $ v  = \sqrt{121 + 49} = \sqrt{170} (ms^{-1})$ A1 $13 (ms^{-1})$ or better. (13.038)2bCorrect use of trigonometry e.g. $\theta = \tan^{-1} \frac{11}{7} - \tan^{-1} \frac{1}{3}$ (=57.5-18.4)M1Condone subtraction in either order Allow if <b>both</b> fractions are the othe way up. Alternatives: scalar product $\theta = \cos^{-1} \left( \frac{21+11}{\sqrt{10}\sqrt{170}} \right)$ cosine rule $4 \times 29 = 10 + 170 - 2\sqrt{10}\sqrt{170} \cos \theta$ $\theta = 39.1$ A1Accept $\pm 39$ or better (39.0938) $0.68(2)$ radians is M1A0 Accept $\pm (360 - 39) = \pm 321$ or better		2i + 5j = 0.5(v - (3i + j))	A1	Correct unsimplified equation
$(\mathbf{v} = /\mathbf{i} + 11\mathbf{j})$ component. Accept alternative notations provided the meaning is clear.Use of PythagorasM1For their $\mathbf{v}$ Independent M1 but they must have a $\mathbf{v}$ $ v  = \sqrt{121 + 49} = \sqrt{170} (m s^{-1})$ A1 $13(m s^{-1})$ or better. (13.038)2bCorrect use of trigonometry e.g. $\theta = \tan^{-1}\frac{11}{7} - \tan^{-1}\frac{1}{3}$ M1Condone subtraction in either order Allow if <b>both</b> fractions are the othe way up. Alternatives: scalar product $\theta = \cos^{-1}\left(\frac{21+11}{\sqrt{10}\sqrt{170}}\right)$ cosine rule $4 \times 29 = 10 + 170 - 2\sqrt{10}\sqrt{170} \cos \theta$ $\theta = 39.1$ A1Accept $\pm 39$ or better (39.0938) $0.68(2)$ radians is M1A0 Accept $\pm (360 - 39) = \pm 321$ or better		- ( ( -//)		1 1
ComponentAccept alternative notations provided the meaning is clear.Use of PythagorasM1For their v Independent M1 but they must have a v $ v  = \sqrt{121 + 49} = \sqrt{170} (m s^{-1})$ A1 $13(m s^{-1})$ or better.
