Pearson Edexcel International Advanced Level In Statistics (WST02) Paper 01

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

General Instructions for Marking

1. The total number of marks for the paper is 75.

2. The Edexcel Mathematics mark schemes use the following types of marks:

   - **M** marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
   - **A** marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
   - **B** marks are unconditional accuracy marks (independent of M marks)

   Marks should not be subdivided.

3. Abbreviations

   These are some of the traditional marking abbreviations that will appear in the mark schemes and can be used if you are using the annotation facility on ePEN:

   - bod – benefit of doubt
   - ft – follow through
     - the symbol √ will be used for correct ft
   - cao – correct answer only
   - cso – correct solution only. There must be no errors in this part of the question to obtain this mark
   - isw – ignore subsequent working
   - awrt – answers which round to

- SC – special case
- oe – or equivalent (and appropriate)
- d… or dep – dependent
- indep – independent
- dp – decimal places
- sf – significant figures
- □ – The answer is printed on the paper or ag- answer given
- ⌐ or d… – The second mark is dependent on gaining the first mark

4. All A marks are 'correct answer only' (cao), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected. If you are using the annotation facility on ePEN, indicate this action by 'MR' in the body of the script.

6. If a candidate makes more than one attempt at any question:
   a) If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
   b) If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.

7. Ignore wrong working or incorrect statements following a correct answer.

Special notes for marking Statistics exams (for AAs only)

- Any correct method should gain credit. If you cannot see how to apply the mark scheme but believe the method to be correct then please send to review.
- For method marks, we generally allow or condone a slip or transcription error if these are seen in an expression. We do not, however, condone or allow these errors in accuracy marks.

(a)	**B1***	Allow any correct equivalent method. E.g. $\frac{1}{2}\times 4\times 4a=\frac{1}{2}\Rightarrow a=\frac{1}{16}$, integration, use of gradients, etc. Answer is given so a complete correct method with no incorrect working must be seen	
(b)	**B1**	Cao	
	M1	Use of equation of line to find *c* e.g. $y-0=-\frac{1}{16}(x-8)$ or use of integration or any valid method	
	A1	Cao correct answer scores M1A1	
(c)	**B1**	For $\mathrm{E}(X)=4$ This may be seen at any point in the solution	
	M1	For use of $\int x^2\mathrm{f}(x)\,\mathrm{d}x \quad x^n\to x^{n+1}$ for both parts of pdf (ignore limits) ft their values of *b* and *c*	
	A1ft	For correct integration of **either** of the 2 parts, ft their values of *b* and *c*	
	depM1	For use of correct limits in **either** part (dep on previous M1) may be implied by sight of 4 or $\frac{44}{3}$ but **not** implied by $\frac{56}{3}$ allow ft on their values of *b* and *c* which you may need to check	
	A1	For complete correct substitution $4+\left[\left(-64+\frac{256}{3}\right)-\left(-4+\frac{32}{3}\right)\right]$ or $\frac{56}{3}$ allow $=4+\frac{44}{3}$	
	A1*	Answer is given so need to see use of $\mathrm{Var}(X)=\mathrm{E}(X^2)-\mathrm{E}(X)^2=\frac{8}{3}$ with values substituted	
(d)	**M1**	For correct method for either Q_1 or Q_3 e.g. $\frac{1}{2}\times Q_1\times\frac{1}{16}\times Q_1=\frac{1}{4}$, $\int_0^{Q_1}\frac{1}{16}x\,\mathrm{d}x=0.25\to\frac{Q_1^2}{32}=0.25$	
	A1	For either awrt 2.83 allow $\sqrt{8}$ oe or awrt 5.17 allow $8-\sqrt{8}$ oe	
	A1	For either awrt 2.83 allow $\sqrt{8}$ oe and awrt 5.17 allow $8-\sqrt{8}$ oe	
(e)	**M1**	For use of $\mathrm{P}(\mu-\sigma<X<\mu+\sigma)$ ft their μ implied by awrt 2.37 and awrt 5.63	
	A1*	Must state that this > 0.5 as it is outside Q_1 and Q_3	

		Allow ‘2.83’ > ‘2.37’ and ‘5.16’ < ‘5.63’ **or** a correct probability calculated awrt 0.65 Answer is given so no incorrect working can be seen. If their values are not consistent with the statistician’s claim, then A0 here.
